

RapidPro

Manufacturing Corporation

Ideas With Vision

**Product Design
and Manufacturing**

Product Development Consultation

is one of RapidPro's strong suits. We have a full range of product design services. We assist customers over any and all manufacturing hurdles including feasibility studies, process selection, material selection, and cost reduction.

RapidPro has a proven track record with inventors. We have the experience and the ability to bring the right products to the right markets. We have knowledgeable patent agents and attorneys ready to assist you to develop your intellectual property. Our goal is to generate income and profit for you and your company with the

Launch and Fulfillment

of your product.

Cast Parts

The casting process is a quick and economical means to produce a low volume of parts for functional testing or marketing samples. The available urethanes, cast metals, and silicones provide a wide range of physical properties with numerous color options.

Prototype Parts

Our machines use 3D CAD (computer-aided design) to create an exact model to your specification. The SLA (Stereolithography) and SLS (Selective Laser Sintering) prototypes can be produced from a wide range of materials with select characteristics. The prototypes can be used for marketing presentations, functional testing, and customer feedback.

Engineering

Our engineering capabilities include:

- Mechanical
- Electrical
- Industrial
- Laser Scanning
- Design for Manufacturing
- Tool and Mold Design

Part Decoration

RapidPro offers a variety of custom textures and professional finishes to your part. Some of these include:

- Painting or Powder Coating
- Pad Printing or Silk Screening
- Laser Engraving or Chemical Etching

Contract Manufacturing

We can produce both simple and complex mechanical and electronic sub-assemblies, as well as fully complete products ready for resale.

We offer a variety of low and high volume production capabilities. In addition to these services, we offer graphics, packaging, assembly and marketing services.

Tooling and Injection Molded Parts

Our injection mold tools can be created from your 3D CAD file or designed by RapidPro. Our team of experts will recommend the right material from a wide selection of plastics.

Metal Manufacturing

We manufacture metal parts utilizing casting, forming and machining processes. Additional fabrication processes are also available through RapidPro.

Ron Angstead
President/CEO

“Whether you’re a first time inventor or an experienced design engineer, RPM is your best resource for Product Development.”

Ron Angstead, President/CEO

Commitment To Our Customers

RapidPro is committed to manufacturing excellence with exceptional quality. Our priority is to provide flexible services at competitive values with on-time delivery.
